Release Notes for Version 7.3.1

Release 7.3.1 is a patch release that includes several feature enhancements and bug fixes.

Feature Enhancements

Bulk Mail Filtering

Bulk mail filtering is no longer a hidden feature. In the Mailbox Discovery section of the Domain Settings page creation of a mailbox is now optional. Simply mark the checkbox to have mailboxes created upon discovery of a new valid recipient.

Reporting Enhancements

- **Top 20 Senders**
A filter has been added to the report to limit it to senders of delivered messages.
- **Advanced Report**
The Destination Identity field has been added to this report.
- **Delivered Messages Report**
The Detail column has been removed from this report

Additional Enhancements

- **Preference setting for the display of the subject field in the Spam Digest.**
On the Preferences >Branding page the Admin can choose to not display the subject in the Spam Digest.
- **The time range selector has been removed from the Personal Dashboard**
The high bandwidth Personal Dashboard quarantine page now includes all messages in the quarantine not just those found since yesterday.
- **The system now takes domain C names into account when accepting messages for delivery.**
- **DNS/Mx Record is now used to resolve the destination server for all out going messages.** Prior to this release outbound messages to local domains always went to the defined mail gateway without the use of Mx record look up.

Fixed Bugs

7827 Unable to change Outbound IP setting

Unable to change the SSN filter settings from BLOCK to QUARANTINE.

7830 XML API – Unexpected alias mailbox deletion when inactive mailbox updated without specifying the status field

When an inactive mailbox is pushed without including the status field causes the aliases of the mailbox to be deleted.

7694 No checking should be done on allowed senders

If an IP is excluded from session defenses the HELO/EHLO parameter should be accepted as is.

7660 Appliance Dashboard caching data and causing confusion

Changes are made, saved but do not update in the display.

7539 Mailboxes page – showing all 7000 users locks up the page

The number of mailboxes displayed at one time is now limited to avoid lockup.
