

Messaging Security Release Notes

Version: 8.2.1

Date: December 2011

Overview

Release 8.2.1 is a small patch release to support the new Encryption product. It also contains a number of bug fixes.

New Features

Below is a description of the new feature added to our ASAV solution.

Route to Encryption Server

Special Routing now contains the option to send mail to the Encryption server for secure delivery. This option is only available if the Encryption feature has been licensed.

Feature Enhancements

Below is a list of small feature enhancements that have been added in this release.

Admin Dashboard

- a. The spool time is now automatically set to 7 days when Email Continuity is enabled

XML API

- a. The Quarantine message list request now supports paging.
- b. Support added to retrieve a message list for a mailbox by a Sys Admin.
- c. Additional request added to retrieve legit delivered messages.

Fixed Bugs

- 9313 The "Compose" feature for a new email message in the Personal Dashboard does not allow semicolons between recipients**
Semicolons are now allowed as address separators.
- 9359 Unhandled error on the mailboxes page when invalid address entered**
An error message is now displayed when an invalid address is entered.
- 9621 Unable to add Country codes in Administrator Dashboard Domain Settings Enemies list**
Country codes are now accepted as valid entries.
