

Messaging Security Release Notes

Version: 8.2

Date: October 2011

Overview

Release 8.2 contains one new feature, several small feature enhancements and bug fixes.

New Features

Below is a description of the new feature added to our ASAV solution.

Special Routing

Special Routing is a new message disposition like Quarantine or Mark Up. It is only available on Outbound filtering. The 'Special Route' is defined as a particular destination host and/or encryption protocol requirement. It can then be used with filters such as DLP, Word Lists or File Extensions.

Feature Enhancements

Below is a list of small feature enhancements that have been added in this release.

Admin Dashboard

- a. LDAP Verifier – the simple mode has been removed

Reporting Enhancements

- a. The message disposition Discarded has been added to the Advanced and Recent Activity Reports
- b. The size of the Recent Activity, Advanced & Delivered Messages Reports can now be limited.
- c. Subscribed report recipient can unsubscribe from a report by clicking the Unsubscribe link in the report.

Personal Dashboard

- a. An option to white list the MIME sender has been added to the Message Preview page
- b. The cause of quarantining the message is now included in the Message Preview page.
- c. The Personal Dashboard now remembers which kind of dashboard the user last visited and returns the user to it the next time he access the dashboard.

Email Continuity

- a. The option to mark a message as spam has been added.

Fixed Bugs

- 9139 Change the Admin Dashboard login screen for hosted branded**
Removed text that only applies to my.redcondor.com administrators.
- 9184 The Composite Verifier does not handle apostrophes**
Email addresses containing apostrophes and other special characters are now verified.
- 8680 System Admin mailbox deletion causes role deletion**
Administrators can no longer delete themselves.
- 8762 Admin Dashboard inaccurate error message**
"These domains require your attention" is displayed even when 'Use EdgeWave MX record format' is unchecked.
- 8985 When the dashboard ACL is enabled new mailboxes cannot be added by the Verifier**
Verifiers can automatically add mailboxes whether or not an ACL exists.
