EdgeWave™

THE EDGEWAVE
EMAIL SECURITY PLATFORM

Delivering the World's Safest Inboxes™

EdgeWave eliminates email-borne security risks for organizations in the face of targeted, socially engineered attacks.

Defense-in-depth has long been the hallmark of a successful security strategy, and for good reason – it works. Historically, however, the "depth" has been a single solution for each layer. Endpoints got AV, web security got gateways, files were backed up, and many more.

Today's increasingly sophisticated attacks are challenging this norm. And there is no better example of this today than email security. As tactics change, malicious content and behavior can manifest itself post-inbox delivery. Even the most feature-rich email security gateway can't guarantee 100% detection of all threats.

And what happens once malicious, email-borne content is detected? Ideally this has occurred before the malicious content has been activated, but how are security professionals to know which users also received the email in question, and remove it before it causes any problems?

The EdgeWave Email Security Platform provides complete **Predelivery Protection, Postdelivery Detection** and **Email Incident Response.** By covering all three elements, EdgeWave follows the defense-in-depth approach, applies it to email security and protects your organization from the latest email threats.

PREDELIVERY PROTECTION

- ePrism™ Email Security Gateway
- AV and Malware Scanning
- Mail reputation and custom filtering rule sets

POSTDELIVERY DETECTION

- ThreatTest™ Anti-Phishing Solution
- Digital fingerprinting and threat scoring
- Combination of machine learning and human review
- iPrism™ Web Protection of Blended Threats

INCIDENT RESPONSE

- ThreatTest global remediation
- Alerting/reporting of phishing & malicious attacks
- Security operation center integration
- Secure Content Archiving™

EdgeWave™
Email Security Platform

Predelivery Protection

Postdelivery Detection

Incident Response

Predelivery Protection

EdgeWave ePrism provides unrivaled email defense against internal and external threats such as spam, viruses, spyware, phishing schemes, identity theft, and other dangerous or offensive content. Our services include industry-leading inbound/outbound spam and antivirus filtering, category-based policy and automated seamless directory integration in a hosted SaaS solution that can be provisioned immediately, without having to install any hardware or software. What's more, the EdgeWave Threat Detection Center provides proactive threat monitoring and analysis designed to stop threats before they get near your internal servers.

Postdelivery Detection

EdgeWave ThreatTest is the world's first fully-managed, postdelivery anti-phishing solution. Patent pending, ThreatTest removes the guesswork and provides an automated process for employees to report suspicious emails to the EdgeWave Threat Detection Center—alleviating helpdesk resource constraints. When an employee receives an email impersonation or other suspicious email, with a click of a button, ThreatTest provides rapid and accurate investigation and incident response.

Incident Response

EdgeWave's Email Incident Response service includes both automatic remediation of detected, malicious email as well as EdgeWave Secure Content Archive. When malicious email is detected by ThreatTest, a follow-up scan of your mail store can be executed to find the same message in additional inboxes and automatically delete or quarantine them. EdgeWave Secure Content Archive saves a copy of every email in your mail store and allows you to safely recover them from both accidental, and malicious, activities.

You can't afford to leave your users unprotected.

Threats like phishing, spear phishing, ransomware, BEC and other socially engineered attacks require pre and post delivery protection, along with powerful incident response tools to guarantee these threats are eliminated across your enterprise. Only EdgeWave gives you all three essential ingredients to keep your business, users and data safe from ever-evolving targeted threats.

Visit **edgewave.com** or call us at **800-782-3762** to learn more about how EdgeWave can help you grow your business and protect your users and data.

About EdgeWave.

EdgeWave is hyper-focused on eliminating email-borne security risks for organizations in the face of targeted, socially engineered attacks.

We've engineered a multi-layered Email Security Platform that provides pre and postdelivery security and incident response. At the core of our platform is ThreatTest,® an automated, anti-phishing solution that uses both machine learning and expert human review to quickly analyze and resolve any suspicious email. This unique, patent-pending approach dramatically reduces advanced, targeted attacks, while also significantly lowering the time and money spent by IT.

We deliver unparalleled inbox protection from today's exploding messaging threats like ransomware, spear phishing, business email compromise and more.

Headquartered in San Diego, CA, EdgeWave has more than 2500 customers and over 3.5 million users worldwide. Main Industries served are:

• **Healthcare**
• **Financial Services**
• **Manufacturing**
• **Technology**
• **Professional Services**
• **Travel / Hospitality**
